

Winter Storm Information

Issued 5:45 AM, December 15, 2015

Moderate to heavy snowfall fell overnight...beginning in most areas on the plains after 2 AM MST. Bands of moderate to heavy snowfall will continue to wrap around a deep low pressure tracking very slowly east-northeastward across northeast Colorado this morning. Snow will also continue to fall in the mountains and high valleys with additional accumulation expected by this afternoon. On the plains of northeast Colorado, another 2 to 6 inches of snow accumulation is likely by mid-afternoon today. Furthermore, Gusty north winds of 20 to 35 mph will produce areas of blowing and drifting snow on the plains creating hazardous driving conditions. Some roads may become impassable due to significant drifting.
